

# Mosquito & Tick Plan

Runs May through September

- The technician treats the perimeter of your yard with a liquid product
  - This creates a barrier between your yard & your neighbors' yards
- They treat any yard ornamentation around the perimeter (fences, trees, etc.)
- Next they treat any trees, shrubs & bushes, tall grasses
  - This ensures that any area where mosquitoes & ticks like to breed & hang out are covered
- They treat any of your active spots throughout the yard (decks, patios, fire pits, trampolines, swing sets, etc.)
  - This puts another barrier between the mosquitoes & you
- Finally, the tech looks for any other areas around your yard that could be potential breeding locations
  - An example of a potential breeding site is deep cracks in a patio that may hold water after a rain

Comes with 5 for sure visits, but if it's rained and you're getting eaten up, give us a call!
